

The Master Percussion MIDI Map

Data Schema

The master map has been expanded with several new columns. This enhanced schema provides the necessary granularity and context for accurate notational mapping.

- `id`: numerical id
- `key`: The MIDI key number (0-127).
- `midi_note`: The human-readable note name (e.g., C1, G#2).
- `instrument_name`: The common name of the base instrument (e.g., "Snare Drum", "Ride Cymbal", "Conga"). This clarifies what is being played.
- `articulation`: The specific playing technique used (e.g., "Standard Hit", "Side Stick", "Open", "Muted"). For simple hits, this may be "Standard Hit".
- `notation_style_granular`: The four-tier classification (CORE, STANDARD EXTENSION, AUXILIARY/EFFECT, WORLD/ORCHESTRAL). This provides nuanced context.
- `instrument_family`: The high-level organological classification (Membranophone, Idiophone, Aerophone) for additional technical context.
- `common_genre_association`: A general guide to the musical contexts where the sound is most frequently found (e.g., "Rock/Pop/Jazz", "Latin", "Orchestral", "Electronic").

This new structure allows a user to immediately understand not just the sound, but the instrument it belongs to, how it's played, its relationship to a standard kit, and its typical musical application. This is the essential context needed to translate a MIDI event into a meaningful symbol on a musical score.

The Master Percussion MIDI Map (Version 2.0)

The following table presents the complete, corrected, and enhanced dataset. It is designed to serve as a definitive reference for musicians, composers, and developers.

Note: For resolved conflicts like Castanets and Timpani, the original id is retained, but the key assignment has been updated to reflect a more logical, non-conflicting value based on common practice or available unassigned keys. The original conflicting key is noted in the rationale for transparency.
